Tampa Bay Buccaneers offense

Scouting report for the Bears · 2026 Week 9 · Buccaneers at Bears, Sun Nov 8, 2026

Data through Week 8 (8 games). Only games before this week are used. Ranks are among all 32 teams.

Roster changes: no in-season trades for TB; CHI added DT Jeffery Simmons

Date	Team	Player	Move	Before the move	Games since
Oct 29	CHI in	⚠ DT Jeffery Simmons	from TEN	87% of TEN def. snaps, 7 games	1 of 8

nflverse's trade feed has nothing after Aug 28, 2025; newer trades come from the hand-kept list and weekly rosters.

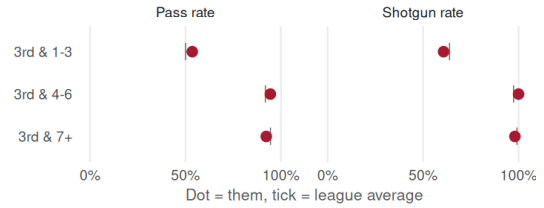

3 things to know

1. **Early downs:** the NFL's most run-heavy vs. expected, -11 pts pass rate over expected. 321 plays
2. **Red zone:** 2nd-least efficient passing game, -0.24 EPA per dropback (league avg +0.12). 33 plays
3. **2-minute:** 4th-least efficient passing game, -0.34 EPA per dropback (league avg +0.03). 55 plays

Early downs: run-first, runs more than the situation calls for

Metric	Value	NFL rank	League avg	Last season	Plays
Pass rate	49%	30th	55%	54% (22nd)	321
Pass rate over expected	-11 pts	32nd	-2 pts	-4 pts (21st)	321
Shotgun rate	62%	8th	54%	58% (19th)	321
EPA per play	-0.08	27th	+0.01	+0.02 (19th)	321

3rd down: pass rates in line with the league at every distance

Distance	Pass rate	EPA/play	Plays
3rd & 1-3	54% (13th)	+0.33 (5th)	28*
3rd & 4-6	94% (14th)	-0.51 (27th)	18*
3rd & 7+	92% (24th)	-0.40 (28th)	52

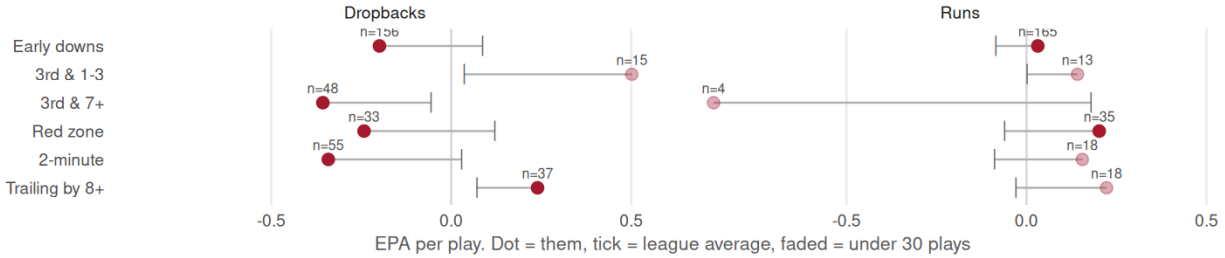

Red zone: balanced (49% pass rate)

Metric	Value	NFL rank	League avg	Last season	Plays
Pass rate	49%	23rd	54%	54% (17th)	68
Pass rate over expected	-10 pts	26th	-5 pts	-3 pts (16th)	68
EPA per play	-0.01	22nd	+0.04	+0.18 (3rd)	68

Tendency shifts: 2 changes in the last 4 games

Situation	Metric	Season	Last 4	Change	Plays (last 4)
Early downs	Pass rate over expected	-11 pts	-19 pts	**-8 pts**	147
Early downs	Shotgun rate	62%	63%	+1 pts	147
Early downs	EPA per play	-0.08	+0.00	+0.08	147
3rd & 1-3	Pass rate	54%	27%	-26 pts	11*
Red zone	Pass rate	49%	29%	**-19 pts**	34
All neutral downs	EPA per play	-0.11	-0.05	+0.06	193

Most dangerous: runs in the red zone (+0.20 EPA per play vs. -0.06 league)

How to read this. Pass rate counts sacks and scrambles as passes. *Pass rate over expected* compares their pass rate with what an average team calls in the same down, distance, field position, score and time (nflverse `xpass` model). EPA = expected points added; above 0 is good for the offense. Early downs, 3rd down, red zone and "all neutral" use only plays when the offense's win probability was 5–95%. The 2-minute and trailing-by-8+ splits use every play. Numbers marked * are under 30 plays: treat them as a hint, not a tendency. Shift = last 4 games differ from the season by 5+ points (0.10 EPA) on 30+ plays. Roster changes lists in-season trades (nflverse trade feed plus a hand-kept list) and other moves seen in weekly rosters; a regular (starting QB, 15%+ of targets, 30%+ of carries, or 60%+ of snaps before the move) is marked ⚠. Data: nflverse play-by-play (nflfastR / nflreadr), openly licensed. Built by Chris Antosiewicz · source.
